

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

LONG-TERM OVERVIEW

YEAR 12			YEAR 13		
Term	Topics	Assessment	Term	Topics	Assessment
1	<ul style="list-style-type: none"> Introduction to the course SLR1 Programming basics (10 lessons) SLR2 Programming next steps (8 lessons) Plus 18 dedicated programming lessons 	<ul style="list-style-type: none"> Completed SLRs 1-2 form the basis for assessment SLR 1-2 exam questions 	1	<ul style="list-style-type: none"> SLR3 Programming paradigms (3 lessons) SLR4 Data structures (9 lessons) SLR5 Algorithms (6 lessons) SLR7 Regular and context-free languages (2 lessons) 4 AS recap lessons Plus 5 dedicated project lessons 	<ul style="list-style-type: none"> Completed SLRs 3, 4 and 5 form the basis for assessment SLR3, 4 and 5 exam questions
2	<ul style="list-style-type: none"> SLR3 Programming paradigms (3 lessons) SLR4 Data structures (4 lessons) SLR6 Abstraction and automation (10 lessons) SLR7 Regular and context-free languages (2 lessons) Plus 26 dedicated programming lessons 	<ul style="list-style-type: none"> Completed SLRs 3, 4, 6 and 7 form the basis for assessment SLR 3, 4, 6 and 7 exam questions 	2	<ul style="list-style-type: none"> SLR2 Programming next steps (2 lessons) SLR7 Regular and context-free languages (2 lessons) SLR8 Classification of algorithms (4 lessons) SLR9 A model of computation (2 lessons) SLR11 Binary (3 lessons) SLR12 Coding text and graphics (2 lessons) 4 AS recap lessons Plus 15 dedicated project lessons 	<ul style="list-style-type: none"> Completed SLRs 2, 7, 8, 9, 11 and 12 form the basis for assessment SLR2, 7, 8, 9, 11 and 12 exam questions
3	<ul style="list-style-type: none"> SLR10 Number system and bases (9 lessons) SLR11 Binary (5 lessons) SLR12 Coding text and graphics (7 lessons) Plus 15 dedicated programming lessons 	<ul style="list-style-type: none"> Completed SLRs 11-12 form the basis for assessment SLR 10-12 exam questions 	3	<ul style="list-style-type: none"> SLR16 Logic gates and Boolean algebra (1 lesson) SLR17 Internal computer architecture (1 lesson) SLR21 Network and the internet (7 lessons) 9 AS recap lessons Plus 12 dedicated project lessons 	<ul style="list-style-type: none"> Completed SLRs 17 and 21 form the basis for assessment SLR17 and 21 exam questions
4	<ul style="list-style-type: none"> SLR13 Coding sound and music (6 lessons) SLR14 Hardware and software (5 lessons) SLR15 Programming languages and translators (5 lessons) SLR16 Logic gates and Boolean algebra (4 lessons) SLR17 Internal computer architecture (8 lessons) 	<ul style="list-style-type: none"> Completed SLRs 13-17 form the basis for assessment SLR 13-17 exam questions 	4	<ul style="list-style-type: none"> SLR22 TCP IP and protocols (11 lessons) SLR23 Databases (8 lessons) Plus 6 dedicated project lessons 	<ul style="list-style-type: none"> Completed SLRs 22 and 23 form the basis for assessment SLR22 and 23 exam questions
5	<ul style="list-style-type: none"> SLR18 Input and output devices (5 lessons) SLR19 Moral, social, legal, cultural issues (2 lessons) SLR20 Communication (4 lessons) SLR21 Network and the internet (4 lessons) SLR27 Aspects of software development (4 lessons) Plus 11 dedicated revision lessons 	<ul style="list-style-type: none"> Completed SLRs 18-21 and 27 form the basis for assessment SLR 18-21 and 27 exam questions 	5	<ul style="list-style-type: none"> SLR24 Big Data (3 lessons) SLR25 Functional programming paradigms (5 lessons) SLR26 Writing functional programs (3 lessons) SLR27 Aspects of software development (3 lessons) 1 AS recap lesson Plus 2 dedicated project lessons Plus 8 revision lessons 	<ul style="list-style-type: none"> Completed SLRs 24-27 form the basis for assessment SLR24-27 exam questions
6	<ul style="list-style-type: none"> AS Level Exam Period Preparation for Year 13 course after exams 		The dedicated programming lessons are for students to engage in self-directed programming. See our Excel delivery calendar AQA AS and A-Level - 1-week model (delivery calendar).xlsx		

SHORT-TERM SCHEME OF LEARNING

1. This lesson-by-lesson breakdown is based on a one-week calendar where a school delivers all the AS content in Year 12 and then delivers the remaining content to make up the full A Level in Year 13. You will need to adapt it slightly to fit your school's delivery model.
2. The delivery method is flipped classroom, and homework is presented *before* the next lesson with a link to our YouTube videos hosted on student.craigndave.org.
3. A description of how a typical Craig 'n' Dave flipped classroom lessons can be structured is available here: craigndave.org/our-pedagogy/alevel-lesson/.
4. Along with the dedicated programming lessons in Year 12, students should reinforce their programming skills through regular practice in their own time. Opportunities for independent programming during lesson time are shown in **green**.
5. Dedicated lesson time for end-of-topic tests and student self-assessment are shown in **blue**.
6. Dedicated lesson time set aside for the A Level project is shown in **purple**.
7. Each topic in this SoL is presented as part of a Structured Learning Record, each structured learning record can be download from your premium account as a single zip file. When extracted they contain the following folders:

Contains all the activities for you to share with your students.

We often provide **more** activities than your students could reasonably complete in the time provided.

We constantly improve and add to our bank of activities for each SLR, so please check each year for the latest updates!

Pick and choose the most appropriate activities for your students as required.

Contains all the activities **plus** model answers.

For you to use as you see fit.

Contains the Structure Learning Records for your students to fill out as they carry out the activities above.

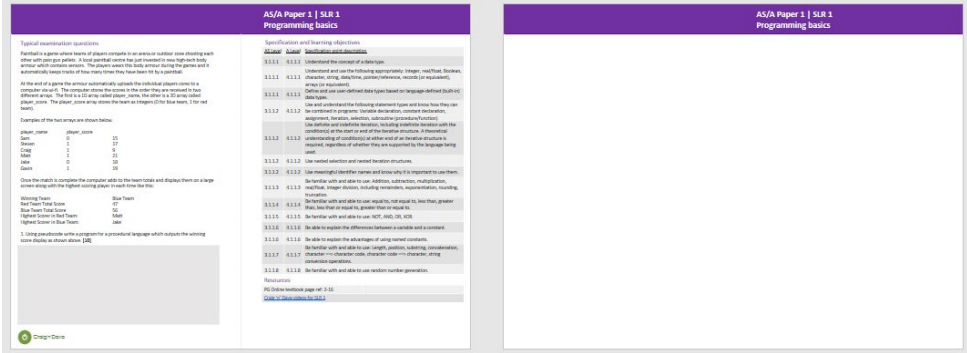

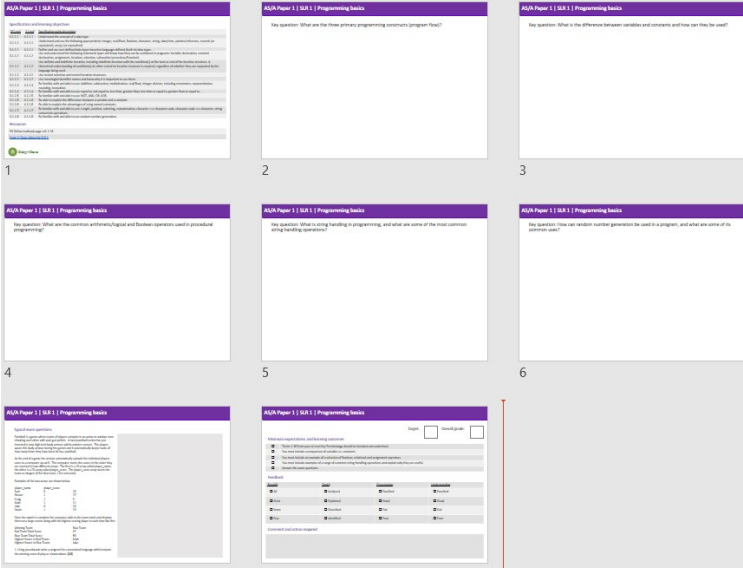

These provide your method of assessment. There is a video in this folder explaining how to get the most out of our SLRs.

Contains answers to the exam questions set in the SLRs.

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

- Out structured learning records come in two formats. We would not expect a student to complete both formats, choose the one which is most appropriate for each of your students.

A3 Unscaffolded format	A4 Scaffolded format
 <p>The A3 Unscaffolded format consists of a sidebar on the left containing exam questions and assessment objectives, and a large blank area on the right for student work.</p>	 <p>The A4 Scaffolded format consists of a grid of question slides numbered 1 to 6, each with a specific question prompt.</p>
<ul style="list-style-type: none"> An unscaffolded format to allow students more freedom in how to demonstrate their knowledge and understanding in any way they see fit. Provides minimal support on the cover page in terms of minimum expectations. Provides an area for exam questions, assessment and feedback. 	<ul style="list-style-type: none"> A scaffolded format providing students with prompts in the form of questions which they need to answer in order to demonstrate their knowledge and understanding. The question slides are referenced in the “Key question” column in the SoL. Provides an area for exam questions, assessment and feedback.

 [Assessment with Craig’n’Dave – \(AS/A Level\)](#)

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

YEAR 12 - TERM 1							
	Topic Focus	Spec ref	Specification Learning Outcomes	Key question	Activities	HW for next lesson	Key Terms
0	Introduction to the course	N/A	<ul style="list-style-type: none"> Understand the course structure and appreciate how you will be taught and assessed in this subject. Understand the importance of the flipped classroom approach. 	What is “Computer Science”?	None	 Introduction to programming Part 1 – Data types	
1	SLR1 Programming basics	3.1.1.1	<ul style="list-style-type: none"> Understand the concept of a data type. Understand and use the following appropriately: Integer, real/float, Boolean, character, string, date/time, pointer/reference, records (or equivalent), arrays (or equivalent) Define and use user-defined data types based on language-defined (built-in) data types. 	What are the various different common data types available in programming and what sort of data can they store? (SLR1 slide 2)	SLR1 Activities folder SLR1 Answers folder (Files starting 01 & 02)	 Introduction to programming Part 2 – Basic constructs	Data type, Integer, Real/Float, Boolean, Character, String, Date/Time, Pointer/Reference, Record, Array/List, User-defined data type, Assignment, Subroutine, Sequence, Selection, Iteration, Count controlled loop, Condition controlled loop, Integer division, ==, !=, <, >, <=, >=, NOT, AND, OR, XOR Variables, Constant, String operations
2	SLR1 Programming basics	3.1.1.1 & 2	<ul style="list-style-type: none"> Use, understand and know how the following statement types can be combined in programs: Variable declaration, constant declaration, assignment, iteration, selection, subroutine (procedure/function) Use definite and indefinite iteration, including indefinite iteration with the condition(s) at the start or the end of the iterative structure. A theoretical understanding of condition(s) at either end of an iterative structure is required, regardless of whether they are supported by the language being used. Use nested selection and nested iteration structures. Use meaningful identifier names and know why it is important to use them. 	What are the three primary programming constructs (program flow)? (SLR1 slide 3)	SLR1 Activities folder SLR1 Answers folder (Files starting 03)	 Introduction to programming Part 3 – Variables and constants	
3	SLR1 Programming basics	3.1.1.2	<ul style="list-style-type: none"> Use, understand and know how the following statement types can be combined in programs: Variable declaration, constant declaration, assignment, iteration, selection, subroutine (procedure/function) Use definite and indefinite iteration, including indefinite iteration with the condition(s) at the start or the end of the iterative structure. A 	What is the difference between variables and constants and how can they be used? (SLR1 slide 4)	SLR1 Activities folder SLR1 Answers folder (Files starting 03)		

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			<p>theoretical understanding of condition(s) at either end of an iterative structure is required, regardless of whether they are supported by the language being used.</p> <ul style="list-style-type: none"> • Use nested selection and nested iteration structures. • Use meaningful identifier names and know why it is important to use them. 				
4	SLR1 Programming basics	3.1.1.2	<ul style="list-style-type: none"> • Use, understand and know how the following statement types can be combined in programs: Variable declaration, constant declaration, assignment, iteration, selection, subroutine (procedure/function) • Use definite and indefinite iteration, including indefinite iteration with the condition(s) at the start or the end of the iterative structure. A theoretical understanding of condition(s) at either end of an iterative structure is required, regardless of whether they are supported by the language being used. • Use nested selection and nested iteration structures. • Use meaningful identifier names and know why it is important to use them. 	No new key questions for this lesson	SLR1 Activities folder SLR1 Answers folder (Files starting 03 & 05)	 Introduction to programming Part 4 – Mathematical operators	
5	SLR1 Programming basics	3.1.1.3 & 4	<ul style="list-style-type: none"> • Be familiar with and be able to use: Addition, subtraction, multiplication, real/float, integer division, including remainders, exponentiation, rounding, truncation • Be familiar with and be able to use: equal to, not equal to, less than, greater than, less than or equal to, greater than or equal to 	What are the common arithmetic/logical and Boolean operators used in procedural programming? (SLR1 slide 5)	SLR1 Activities folder SLR1 Answers folder (Files starting 04)		
6	SLR1 Programming basics	3.1.1.5 & 6	<ul style="list-style-type: none"> • Be familiar with and be able to use: NOT, AND, OR, XOR • Be able to explain the differences between a variable and a constant. • Be able to explain the advantages of using named constants. 	No new key questions for this lesson	SLR1 Activities folder SLR1 Answers folder (Files starting 04)	 Introduction to programming Part 5 – String handling	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

7	SLR1 Programming basics	3.1.1.6 & 7	<ul style="list-style-type: none">• Be able to explain the differences between a variable and a constant.• Be able to explain the advantages of using named constants.• Be familiar with and be able to use: Length, position, substring, concatenation, character ==> character code, character code ==> character, string conversion operations	What is string handling in programming and what are some of the most common string handling operations? (SLR1 slide 6)	SLR1 Activities folder SLR1 Answers folder (Files starting 05 & 06)	 Introduction to programming Part 6 – Random numbers	
8	SLR1 Programming basics	3.1.1.8	<ul style="list-style-type: none">• Be familiar with and able to use random number generation.	How can random number generation be used in a program and what are some of its common uses? (SLR1 slide 7)	SLR1 Activities folder SLR1 Answers folder (Files starting 07)		
9	SLR1 Programming basics	Buffer lesson	This lesson is provided as a buffer, use it as you see fit.			Any unfinished activities from SLR1	
10	SLR1 – End-of-topic test	End-of-topic test Students to self-assess and mark each other’s questions to become familiar with examining mark schemes.				SLR1 Examination Questions (slide 8)	
11 to 18	Independent programming	N/A	Gain experience in practical programming Use our T.I.M.E workbooks, Programming challenges and Defold games tutorials.			Various	
19	SLR2 Programming next steps	3.1.1.9	<ul style="list-style-type: none">• Be familiar with the concept of exception handling.• Know how to use exception handling in a programming language with which students are familiar.	How can exception handling help to improve the robustness of a program? (SLR2 slide 2)	SLR2 Activities folder SLR2 Answers folder (Files starting 01)	 Subroutines, interfaces and parameters	Exception handling, Parameter, Procedure,
20	SLR2 Programming next steps	3.1.1.10	<ul style="list-style-type: none">• Be familiar with subroutines and their uses.• Know that a subroutine is a named ‘out of line’ block of code that may be executed (called) by simply writing its name in a program statement.• Be able to explain the advantages of using subroutines in programs.	What is the difference between a procedure and a function and how do we use them to pass parameters by value? (SLR2 slide 3)	SLR2 Activities folder SLR2 Answers folder (Files starting 02)		Function, Local variable, Global variable
21	SLR2 Programming next steps	3.1.1.10 & 11	<ul style="list-style-type: none">• Be familiar with subroutines and their uses.• Know that a subroutine is a named ‘out of line’ block of code that may be executed (called) by simply writing its name in a program statement.• Be able to explain the advantages of using subroutines in programs.• Be able to describe the use of parameters to pass data within programs.	What is the difference between a procedure and a function and how do we use them to pass parameters by value? (SLR2 slide 3)	SLR2 Activities folder SLR2 Answers folder (Files starting 03)		

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			<ul style="list-style-type: none">• Be able to use subroutines with interfaces.				
22	SLR2 Programming next steps	3.1.1.11 &12	<ul style="list-style-type: none">• Be able to describe the use of parameters to pass data within programs.• Be able to use subroutines with interfaces.• Be able to use subroutines that return values to the calling routine.	What is the difference between a procedure and a function and how do we use them to pass parameters by value? (SLR2 slide 3)	SLR2 Activities folder SLR2 Answers folder (Files starting 04)	 Global and local variables	
23	SLR2 Programming next steps	3.1.1.13	<ul style="list-style-type: none">• Known that subroutines may declare their own variables, called local variables, and that local variables: Exist only while the subroutine is executing, are accessible only within the subroutine• Be able to use local variables and explain why it is good practice to do so.	What is the difference between local and global variables and why are local variables preferred? (SLR2 slide 4)	SLR2 Activities folder SLR2 Answers folder (Files starting 05)		
24	SLR2 Programming next steps	3.1.1.14	<ul style="list-style-type: none">• Be able to contrast local variables with global variables.	No new key questions for this lesson	SLR2 Activities folder SLR2 Answers folder (Files starting 05)		
25	SLR2 Programming next steps	Buffer lesson	This lesson is provided as a buffer, use it as you see fit.		Any unfinished activities from SLR2

YEAR 12 - TERM 2							
Topic Focus	Spec ref	Specification Learning Outcomes		Key question	Activities	HW for next lesson	Key Terms
						Characteristics of programming paradigms Structured approach to program design	
37	SLR3 Programming paradigms	3.1.2.1	<ul style="list-style-type: none"> Understand the structured approach to program design and construction. Be able to construct and use hierarchy charts when designing programs. Be able to explain the advantages of the structured approach. 	What do we mean by the term programming paradigm? (SLR3 slide 2) What is a hierarchy chart and how can it be used to help break down a problem? (SLR3 slide 3) What are the features of procedural programming? (SLR3 slide 4)	SLR2 Activities folder SLR2 Answers folder (Files starting 01 & 02)		Hierarchy chart, Structured approach
38	SLR3 Programming paradigms	Buffer lesson	This lesson is provided as a buffer, use it as you see fit.		Any unfinished activities from SLR3		
39	SLR3 – End-of-topic test	End-of-topic test	Students to self-assess and mark each other's questions to become familiar with examining mark schemes.		SLR3 Examination Questions (slide 6)		
40 to 42	Independent programming	N/A	Gain experience in practical programming Use our <i>T.I.M.E</i> workbooks, <i>Programming challenges</i> and <i>Defold games tutorials</i> .		Various	Data structures Arrays, records, lists and tuples	
43	SLR4 Data structures	3.2.1.1 & 2	<ul style="list-style-type: none"> Be familiar with the concept of data structures. Use arrays (or equivalent) in the design of solutions to simple problems. 	What are the characteristics of arrays, lists, tuples and records? (SLR4 slide 3)	SLR4 Activities folder SLR4 Answers folder (Files starting 01)	File handling	Text file, Binary (non-text file)
44	SLR4 Data structures	3.2.1.3	<ul style="list-style-type: none"> Be able to read/write from/to a text file Be able to read/write data from/to a binary(nontext) file 	How do you read/write to/from a text file? (SLR4 slide 4)	SLR4 Activities folder SLR4 Answers folder (Files starting 02)		
45	SLR4 Data structures	Buffer lesson	This lesson is provided as a buffer, use it as you see fit.		Any unfinished activities from SLR4		

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

46	SLR4 – End-of-topic test	End-of-topic test Students to self-assess and mark each other's questions to become familiar with examining mark schemes.			SLR4 Examination Questions (slide 16)		
47 to 54	Independent programming	N/A	Gain experience in practical programming Use our <i>T.I.M.E</i> workbooks, <i>Programming challenges</i> and <i>Defold games</i> tutorials.		Various	 Analysis and design of algorithms	
55	SLR6 Abstraction and automation	3.4.1.1	<ul style="list-style-type: none"> Be able to develop solutions to simple logic problems. Be able to check solutions to simple logic problems. 	No key questions for this lesson	SLR6 Activities folder SLR6 Answers folder (Files starting 01)	 Converting pseudocode to high-level code	Algorithm, Pseudocode, Test data, Abstraction, Procedural abstraction, Functional abstraction, Data abstraction, Problem abstraction, Decomposition, Composition, State transition diagram, FSM
56	SLR6 Abstraction and automation	3.4.1.2	<ul style="list-style-type: none"> Understand the term algorithm. Be able to express the solution to a simple problem as an algorithm using pseudo-code, with the standard constructs. Be able to hand-trace algorithms. Be able to convert an algorithm from pseudocode into high-level-language program code. Be able to articulate how a program works, arguing for its correctness and its efficiency using logical reasoning, test data and user feedback. 	What methods do we have to help us understand and express algorithms? (SLR6 slide 3)	SLR6 Activities folder SLR6 Answers folder (Files starting 02)	 Hand tracing algorithms	
57	SLR6 Abstraction and automation	3.4.1.2	<ul style="list-style-type: none"> Understand the term algorithm. Be able to express the solution to a simple problem as an algorithm using pseudo-code, with the standard constructs. Be able to hand-trace algorithms. Be able to convert an algorithm from pseudocode into high-level-language program code. Be able to articulate how a program works, arguing for its correctness and its efficiency using logical reasoning, test data and user feedback. 	What methods do we have to help us understand and express algorithms? (SLR6 slide 3)	SLR6 Activities folder SLR6 Answers folder (Files starting 03 & 04)	 The need for abstraction  Nature of abstraction	
58	SLR6 Abstraction and automation	3.4.1.2 & 3	<ul style="list-style-type: none"> Understand the term algorithm. Be able to express the solution to a simple problem as an algorithm using pseudo-code, with the standard constructs. Be able to hand-trace algorithms. Be able to convert an algorithm from pseudocode into high-level-language program code. Be able to articulate how a program works, arguing for its correctness and its efficiency using logical reasoning, test data and user feedback. 	What is meant by the term “abstraction” and how does it relate to information hiding? (SLR6 slide 4) How could abstraction be used in the production of different styles of maps? (SLR6 slide 5)	SLR6 Activities folder SLR6 Answers folder (Files starting 05 & 06)	 Procedural, functional and data abstraction	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			<ul style="list-style-type: none"> Be familiar with the concept of abstraction as used in computations and know that: <ul style="list-style-type: none"> representational abstraction is a representation arrived at by removing unnecessary details abstraction by generalisation or categorisation is a grouping by common characteristics to arrive at a hierarchical relationship of the 'is a kind of' type. 				
59	SLR6 Abstraction and automation	3.4.1.4 &5	<ul style="list-style-type: none"> Be familiar with the process of hiding all details of an object that do not contribute to its essential characteristics Know that procedural abstraction represents a computational method. 	What is meant by procedural abstraction? (SLR6 slide 6)	SLR6 Activities folder SLR6 Answers folder (Files starting 07 & 08)		
60	SLR6 Abstraction and automation	3.4.1.6 &7	<ul style="list-style-type: none"> Know that for functional abstraction the particular computation method is hidden. Know that details of how data is represented are hidden, allowing new kinds of data objects to be constructed from previously defined types. 	What is meant by functional abstraction? (SLR6 slide 7) What is meant by data abstraction? (SLR6 slide 8)	SLR6 Activities folder SLR6 Answers folder (Files starting 09 & 10)	 Problem decomposition  Problem abstraction, reduction	
61	SLR6 Abstraction and automation	3.4.1.8 &9	<ul style="list-style-type: none"> Know that details are removed until the problem is represented in a way that is possible to solve because the problem reduces to one that has already been solved. Know that procedural decomposition means breaking a problem into several sub-problems so that each sub-problem accomplishes an identifiable task, which might itself be further subdivided. 	What is meant by problem abstraction/reduction? (SLR6 slide 9)	SLR6 Activities folder SLR6 Answers folder (Files starting 11)	 Composition  Automation	
62	SLR6 Abstraction and automation	3.4.1.10 &11	<ul style="list-style-type: none"> Know how to build a composition abstraction by combining procedures to form compound procedures. Know how to build data abstractions by combining data objects to form compound data; for example, tree data structure. Understand that automation requires putting models (abstraction of real-world objects/ phenomena) into action to solve problems. This is achieved by: <ul style="list-style-type: none"> creating algorithms implementing the algorithms in program code 	What are decomposition and composition? (SLR6 slide 10) What is automation and how does it help us to solve problems? (SLR6 slide 11)	SLR6 Activities folder SLR6 Answers folder (Files starting 12 & 13)		

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			(instructions) <ul style="list-style-type: none">• implementing the models in data structures• executing the code.				
63	SLR6 Abstraction and automation	Buffer lesson	This lesson is provided as a buffer, use it as you see fit.			Any unfinished activities from SLR6	
64	SLR6 – End-of-topic test	End-of-topic test Students to self-assess and mark each other’s questions to become familiar with examining mark schemes.			SLR6 Examination Questions (slide 12)	 Finite state machines	
65	SLR7 Regular and context-free languages	3.4.2.1	<ul style="list-style-type: none">• Be able to draw and interpret simple state transition diagrams and state transition tables for FSMs with no output and with output (Mealy machines only).	What is a state transitions diagram and how does it allow us to represent a Finite State Machine? (SLR7 slide 3)	SLR7 Activities folder SLR7 Answers folder (Files starting 01)		
66	SLR7 – End-of-topic test	End-of-topic test Students to self-assess and mark each other’s questions to become familiar with examining mark schemes.			SLR7 Examination Questions (slide 9)		
67 to 78	Independent programming	N/A	Gain experience in practical programming Use our <i>T.I.M.E workbooks, Programming challenges and Defold games tutorials.</i>			Various	
79 to 84	This is the last week before Christmas. It has been left free in our delivery calendar as a buffer week.

YEAR 13 - TERM 1							
	Topic Focus	Spec ref	Specification Learning Outcomes	Key question	Activities	HW for next lesson	Key Terms
0	Introduction to the course	N/A	<ul style="list-style-type: none"> Understand the year 13 course structure and appreciate how you will be taught and assessed in this subject. Understand the importance of the computing project. 	None	None		
1 & 2	Project analysis intro	4.14.3.1	These lessons are given over to the project. This is marked out of 75 and worth 20% of the full A Level qualification. The analysis section is worth 9 marks.				
3	SLR1 – Programming basics (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR1 Year 13 Recap Lesson (student version)		
4	SLR3 – Programming paradigms (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR3 Year 13 Recap Lesson (student version)	 Characteristics of programming paradigms	
5	SLR3 Programming paradigms	4.1.2.1	<ul style="list-style-type: none"> Understand the characteristics of the procedural and object-oriented programming paradigms and have experience of programming in each. 	What do we mean by the term programming paradigm? (SLR3 slide 2) What are the features of object-oriented languages? (SLR3 slide 5)	SLR3 Activities folder SLR3 Answers folder (Files starting 01 & 03)	 Object-oriented programming – part 1  Object-oriented programming – part 2	
6	SLR3 Programming paradigms	4.1.2.3	<ul style="list-style-type: none"> Be familiar with the concepts of: class, object, instantiation, encapsulation, inheritance, aggregation, composition, polymorphism, overriding Know why the object-oriented paradigm is used Be aware of the following object-oriented design principles: Encapsulate what varies, favour composition over inheritance, program to interface, not implementation Be able to write object-oriented programs. Be able to draw and interpret class diagrams 	What are the features of object-oriented languages? (SLR3 slide 5)	SLR3 Activities folder SLR3 Answers folder (Files starting 03)	 Object-oriented programming – part 3  Object-oriented programming – part 4  Object-oriented programming – part 5	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

7	SLR3 Programming paradigms	4.1.2.3	<ul style="list-style-type: none"> Be familiar with the concepts of: Class, object, instantiation, encapsulation, inheritance, aggregation, composition, polymorphism, overriding Know why the object-oriented paradigm is used Be aware of the following object-oriented design principles: Encapsulate what varies, favour composition over inheritance, program to interface, not implementation Be able to write object-oriented programs. Be able to draw and interpret class diagrams 	What are the features of object-oriented languages? (SLR3 slide 5)	SLR3 Activities folder SLR3 Answers folder (Files starting 03)		
8	SLR4 – Data structures (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR4 Year 13 Recap Lesson (student version)	 Data structures  Static and dynamic data structures	
9	SLR4 Data structures	4.2.1.4	<ul style="list-style-type: none"> Be familiar with the concept of a: Queue, stack, graph, tree, hash table, dictionary, vector. Be able to distinguish between static and dynamic structures and compare their uses, as well as explaining the advantages and disadvantages of each. Describe the creation and maintenance of data within: queues (linear, circular, priority), stacks, hash tables. 	How do the operations push and pop work with a stack stored as an array? (SLR4 slide 5) How do the operations enqueue and dequeue work with a queue stored as an array? (SLR4 slide 6) What are the uses of stacks and queues in computer science? (SLR4 slide 7)	SLR4 Activities folder SLR4 Answers folder (Files starting 04 & 05)	 Stacks and queues – Part 1  Stacks and queues – Part 2	
10	SLR4 Data structures	4.2.2.1 & 4.2.3.1	<ul style="list-style-type: none"> Be able to describe and apply the following to linear queues, circular queues and priority queues: Add an item, remove an item, test for an empty queue, test for a full queue Be able to describe and apply the following operations: Push, pop, peek or top, test for an empty stack, test for a full stack. 	How do the operations push and pop work with a stack stored as an array? (SLR4 slide 5) How do the operations enqueue and dequeue work with a queue stored as an array? (SLR4 slide 6) What are the uses of stacks and queues in computer science? (SLR4 slide 7)	SLR4 Activities folder SLR4 Answers folder (Files starting 04 & 05)	 Graphs	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

11	SLR4 Data structures	4.2.4.1	<ul style="list-style-type: none"> Be aware of a graph as a data structure used to represent more complex relationships. Be familiar with typical uses for graphs. Be able to explain: Graph, weighted graph, vertex/node, edge/arc, undirected graph, directed graph Know how an adjacency matrix and an adjacency list may be used to represent a graph. Be able to compare the use of adjacency matrices and adjacency lists. 	<p>What are trees, directed or undirected graphs, and how can they be represented using other data structures? (SLR4 slide 8)</p> <p>What is an adjacency matrix? (SLR4 slide 9)</p>	SLR4 Activities folder SLR4 Answers folder (Files starting 06)		
12	SLR4 Data structures	4.2.4.1	<ul style="list-style-type: none"> Be aware of a graph as a data structure used to represent more complex relationships. Be familiar with typical uses for graphs. Be able to explain: Graph, weighted graph, vertex/node, edge/arc, undirected graph, directed graph Know how an adjacency matrix and an adjacency list may be used to represent a graph. Be able to compare the use of adjacency matrices and adjacency lists. 	<p>What are trees, directed or undirected graphs, and how can they be represented using other data structures? (SLR4 slide 8)</p> <p>What is an adjacency matrix? (SLR4 slide 9)</p>	SLR4 Activities folder SLR4 Answers folder (Files starting 06)	 Trees and binary trees  Relationship between trees and graphs	
13	SLR4 Data structures	4.2.5.1	<ul style="list-style-type: none"> Know that a tree is a connected, undirected graph with no cycles. Know that a rooted tree is a tree in which one vertex has been designated as the root. A rooted tree has parent-child relationships between nodes. The root is the only node with no parent and all other nodes are descendants of the root. Know that a binary tree is a rooted tree in which each node has at most two children. Be familiar with typical uses for rooted trees. 	<p>How can binary trees be visualised using arrays or objects? (SLR4 slide 10)</p> <p>How do you input and delete data from binary trees? (SLR4 slide 11)</p>	SLR4 Activities folder SLR4 Answers folder (Files starting 07)	 Hash tables – Part 1  Hash tables – Part 2	
14	SLR4 Data structures	4.2.6.1	<ul style="list-style-type: none"> Be familiar with the concept of a hash table and its uses. Be able to apply simple hashing algorithms. Know what is meant by a collision and how collisions are handled using rehashing. 	<p>How do hash tables, hashing functions and overflow work? (SLR4 slide 12)</p>	SLR4 Activities folder SLR4 Answers folder (Files starting 08)	 Dictionaries	
15	SLR4 Data structures	4.2.7.1	<ul style="list-style-type: none"> Be familiar with the concept of a dictionary. Be familiar with simple applications of dictionaries; for example, information retrieval, and have experience of using a dictionary data structure in a programming language. 	<p>What is a dictionary and how can it be used? (SLR4 slide 13)</p>	SLR4 Activities folder SLR4 Answers folder (Files starting 09)	 Vectors – Part 1, Overview and representation	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

						 Vectors – Part 2, Visualising vectors and maths	
16	SLR4 Data structures	4.2.8.1	<ul style="list-style-type: none"> Be familiar with the concept of a vector and the following notations for specifying a vector: • $[2.0, 3.14159, -1.0, 2.718281828]$ • 4-vector over \mathbb{R} written as \mathbb{R}^4 • function interpretation • $0 \mapsto 2.0$ • $1 \mapsto 3.14159$ • $2 \mapsto -1.0$ • $3 \mapsto 2.718281828$ • \mapsto means maps to, That all the entries must be drawn from the same field; e.g., \mathbb{R}. Dictionary representation of a vector. List representation of a vector. 1-D array representation of a vector. Visualising a vector as an arrow. 	What are vectors and how do you represent them as an arrow, 1D arrow and as an arrow? (SLR4 slide 14)	SLR4 Activities folder SLR4 Answers folder (Files starting 10)	 Vectors – Part 3, Convex combination  Vectors – Part 4, Dot or scalar product  Vectors – Part 5, Application of dot product	
17	SLR4 Data structures	4.2.8.1	<ul style="list-style-type: none"> Vector addition and scalar-vector multiplication. Convex combination of two vectors, u and v. Dot or scalar product of two vectors. Applications of dot product. 	What is vector addition, scalar vector multiplication, the convex combination of two vectors and dot or scale product of two vectors? (SLR4 slide 15)	SLR4 Activities folder SLR4 Answers folder (Files starting 10 & 11)		
18	SLR4 – End-of-topic test	End-of-topic test Students to self-assess and mark each other's questions to become familiar with examining mark schemes.			SLR4 Examination Questions (slide 16 & 17)		
19 to 21	Project analysis Project design intro	4.14.3.1	These lessons are given over to the project. This is marked out of 75 and worth 20% of the full A Level qualification. The analysis section is worth 9 marks. The design section is worth 12 marks.				
						 Graphs traversal algorithms	
22	SLR5 Algorithms	4.3.1.1	<ul style="list-style-type: none"> Be able to trace breadth-first and depth-first search algorithms and describe typical applications of both. 	How does the breadth-first and depth-first searches work, how are they different? (SLR5 slides 2)	SLR5 Activities folder SLR5 Answers folder (Files starting 01, 02 & 03)	 Tree traversal algorithms	
23	SLR5 Algorithms	4.3.2.1	<ul style="list-style-type: none"> Be able to trace the tree-traversal algorithms: <ul style="list-style-type: none"> pre-order post-order in-order. 	How do the different tree traversal algorithms work? (SLR5 slides 3)	SLR5 Activities folder SLR5 Answers folder (Files starting 04)	 Reverse Polish Notation – Part 1  Reverse Polish Notation – Part 2	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			<ul style="list-style-type: none"> Be able to describe the uses of tree-traversal algorithms. 				
24	SLR5 Algorithms	4.3.3.1	<ul style="list-style-type: none"> Be able to convert simple expressions in infix form to Reverse Polish notation (RPN) form and vice versa. Be aware of why and where it is used. 	What is Reverse Polish Notation and why is it useful? (SLR5 slides 4)	SLR5 Activities folder SLR5 Answers folder (Files starting 04)	 Linear search Binary search	
25	SLR5 Algorithms	4.3.4.1, 2 & 3	<ul style="list-style-type: none"> Know and be able to trace and analyse the complexity of the linear search algorithm. Know and be able to trace and analyse the time complexity of the binary search algorithm. Be able to trace and analyse the time complexity of the binary tree search algorithm. 	How does linear search work? (SLR5 slides 5) How does a binary search work and how is it different from a linear search? (SLR5 slides 6)	SLR5 Activities folder SLR5 Answers folder (Files starting 05, 06 & 07)	 Bubble sort Merge sort	
26	SLR5 Algorithms	4.3.5.1 & 2	<ul style="list-style-type: none"> Know and be able to trace and analyse the time complexity of the bubble sort algorithm. Be able to trace and analyse the time complexity of the merge sort algorithm. 	How does a bubble sort work? (SLR5 slides 7) How does a merge sort work and how is it different from a bubble sort? (SLR5 slides 8)	SLR5 Activities folder SLR5 Answers folder (Files starting 08 & 09)	 Dijkstra's shortest path	
27	SLR5 Algorithms	4.3.6.1	<ul style="list-style-type: none"> Understand and be able to trace Dijkstra's shortest path algorithm. Be aware of applications of shortest path algorithm. 	What is Dijkstra's shortest path algorithm and how does it work? (SLR5 slides 9)	SLR5 Activities folder SLR5 Answers folder (Files starting 10)		
28	SLR6 – Abstraction and automation and (AS RECAP LESSON) SLR 7 – Regular and context-free languages (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR6 Year 13 Recap Lesson (student version) SLR7 Year 13 Recap Lesson (student version)	 Maths for regular expressions, Part 1	
29	SLR7 Regular and context-free languages	4.4.2.2	<ul style="list-style-type: none"> Be familiar with the concept of a set and the following notations for specifying a set: $A = \{1, 2, 3, 4, 5\}$ or set comprehension: $A = \{x \mid x \in \mathbb{N} \wedge x \geq 1\}$ where A is the set consisting of those objects x such that $x \in \mathbb{N}$ and $x \geq 1$ is true. Know that the empty set, $\{\}$, is the set with no elements. Know that an alternative symbol for the empty set is \emptyset. 	What are finite sets, infinite sets, countably infinite sets, cardinality of a finite set and the cartesian product of sets? (SLR7 slide 4)	SLR7 Activities folder SLR7 Answers folder (Files starting 02)	 Maths for regular expressions, Part 2	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			<ul style="list-style-type: none"> • Be familiar with the compact representation of a set, for example, the set $\{0^n1^n \mid n \geq 1\}$. This set contains all strings with an equal number of 0s and 1s. • Be familiar with the concept of: <ul style="list-style-type: none"> • finite sets • infinite sets • countably infinite sets • cardinality of a finite set • Cartesian product of sets. 				
30	SLR7 Regular and context-free languages	4.4.2.2 & 3	<ul style="list-style-type: none"> • Be familiar with the meaning of the term: <ul style="list-style-type: none"> • subset • proper subset • countable set. • Be familiar with the set operations: <ul style="list-style-type: none"> • membership • union • intersection • difference. • Know that a regular expression is simply a way of describing a set and that regular expressions allow particular types of languages to be described in a convenient shorthand notation • Be able to form and use simple regular expressions for string manipulation and matching. • Be able to describe the relationship between regular expressions and FSMs. • Be able to write a regular expression to recognise the same language as a given FSM and vice versa. 	<p>What are subsets, proper subsets and countable sets? YEAR 13 - TERM 2							
	Topic Focus	Spec ref	Specification Learning Outcomes	Key question	Activities	HW for next lesson	Key Terms
31	SLR7 Regular and context-free languages	4.4.2.3 & 4	<ul style="list-style-type: none"> Know that a regular expression is simply a way of describing a set and that regular expressions allow particular types of languages to be described in a convenient shorthand notation Be able to form and use simple regular expressions for string manipulation and matching. Be able to describe the relationship between regular expressions and FSMs. Be able to write a regular expression to recognise the same language as a given FSM and vice versa. Know that a language is called regular if it can be represented by a regular expression. 	What are regular expressions and how can we use them to perform simple string manipulation and pattern matching? (SLR7 slide 7)	SLR7 Activities folder SLR7 Answers folder (Files starting 04 & 05)	 BNF and syntax diagrams	
32	SLR7 Regular and context-free languages	4.4.3.1	<ul style="list-style-type: none"> Be able to check language syntax by referring to BNF or syntax diagrams and formulate simple production rules. Be able to explain why BNF can represent some languages that cannot be represented using regular expressions. 	What is BNF and how does it relate to syntax diagrams? (SLR7 slide 8)	SLR7 Activities folder SLR7 Answers folder (Files starting 06)		
33	SLR7 – End-of-topic test	End-of-topic test Students to self-assess and mark each other's questions to become familiar with examining mark schemes.			SLR7 Examination Questions (slide 10-11)		
34	SLR2 – Programming next steps (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR2 Year 13 Recap Lesson (student version)		
35	SLR2 Programming next steps	4.1.1.15	<ul style="list-style-type: none"> Be able to explain how a stack frame is used with subroutine calls to store: Return address, parameters, local variables 	How is a stack frame used when a program calls a subroutine? (SLR2 slide 5)	SLR2 Activities folder SLR2 Answers folder (Files starting 06)	 Recursion	
36	SLR2 Programming next steps	4.1.1.16	<ul style="list-style-type: none"> Be familiar with the use of recursive techniques in programming languages (general and base cases and the mechanism for implementation). Be able to solve simple problems using recursion. 	What is recursion and how does it differ from using an iterative approach? (SLR2 slide 6)	SLR2 Activities folder SLR2 Answers folder (Files starting 07)		
37 to 40	Project design	4.14.3.2	These lessons are given over to the project. This is marked out of 75 and worth 20% of the full A Level qualification. The design section is worth 12 marks.				

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

						 <u>Algorithmic complexity, efficiency and permutation</u>	
41	SLR8 Classification of algorithms	4.4.4.1	<ul style="list-style-type: none"> Understand that algorithms can be compared by expressing their complexity as a function relative to the size of the problem. Understand that the size of the problem is the key issue. Understand that some algorithms are more efficient: <ul style="list-style-type: none"> time-wise than other algorithms space-wise than other algorithms. 	Why are execution time and space an important consideration when talking about the suitability of different algorithms? (SLR8 slides 3)	SLR8 Activities folder SLR8 Answers folder (Files starting 01)	 <u>Measures to determine efficiency of algorithms</u>  <u>Comparison of the complexity of algorithms</u>  <u>Big O notation in practice</u>	
42	SLR8 Classification of algorithms	4.4.4.2 & 3	<ul style="list-style-type: none"> Be familiar with the mathematical concept of a function as a mapping from one set of values, the domain, to another set of values, drawn from the co-domain; for example, $\mathbb{N} \rightarrow \mathbb{N}$. Be familiar with the concept of: <ul style="list-style-type: none"> a linear function; for example, $y = 2x$ a polynomial function; for example, $y = 2x^2$ an exponential function; for example, $y = 2^x$ a logarithmic function; for example, $y = \log_{10} x$. Be familiar with the notion of permutation of a set of objects or values, for example, the letters of a word and that the number of permutations of n distinct objects is n factorial ($n!$). Be familiar with Big-O notation to express time complexity and be able to apply it to cases where the running time requirements of the algorithm grow in: constant time, logarithmic time, linear time, polynomial time, exponential time. Be able to derive the time complexity of an algorithm 	What is meant by Big O notation? (SLR8 slides 4) How can we use Big O notation to compare the complexity of different algorithms? (SLR8 slides 5)	SLR8 Activities folder SLR8 Answers folder (Files starting 02 & 03)	 <u>Limits of algorithms</u>	
43	SLR8 Classification of algorithms	4.4.4.4 & 5	<ul style="list-style-type: none"> Be aware that algorithmic complexity and hardware impose limits on what can be computed. Know that algorithms may be classified as being either: 	What are some of the limits on computation? (SLR8 slides 6)	SLR8 Activities folder SLR8 Answers folder (Files starting 04)	 <u>The Halting problem</u>	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			<ul style="list-style-type: none"> tractable – problems that have a polynomial (or less) time solution are called tractable problems. intractable – problems that have no polynomial (or less) time solution are called intractable problems. 				
44	SLR8 Classification of algorithms	4.4.4.6 & 7	<ul style="list-style-type: none"> Be aware that some problems cannot be solved algorithmically. Describe the Halting problem (but not prove it), that is the unsolvable problem of determining whether any program will eventually stop if given a particular input. Understand the significance of the Halting problem for computation. 	What is the difference between computable and non-computable problems? (SLR8 slides 7) What is the Halting problem? (SLR8 slides 8)	SLR8 Activities folder SLR8 Answers folder (Files starting 05)	 The Turing machine	
45	SLR9 A model of computation	4.4.5.1 & 2	<ul style="list-style-type: none"> Be familiar with the structure and use of Turing machines that perform simple computations. Know that a Turing machine can be viewed as a computer with a single fixed program, expressed using: <ul style="list-style-type: none"> a finite set of states in a state transition diagram a finite alphabet of symbols an infinite tape with marked-off squares a sensing read-write head that can travel along the tape, one square at a time. One of the states is called a start state and states that have no outgoing transitions are called halting states. 	What is a Turing machine and how does it operate? (SLR9 slides 2)	SLR9 Activities folder SLR9 Answers folder (Files starting 01)	 Transition functions and state transition diagrams  The importance of the Universal Turing machine	
46	SLR9 A model of computation	4.4.5.3, 4 and 5	<ul style="list-style-type: none"> Understand the equivalence between a transition function and a state transition diagram. Be able to: <ul style="list-style-type: none"> represent transition rules using a transition function represent transition rules using a state transition diagram hand-trace simple Turing machines. Be able to explain the importance of Turing machines and the Universal Turing machine to the subject of computation. 	What is the relationship between a transition function and a state transition diagram? (SLR9 slides 3) What is the importance of the Universal Turing Machine to the subject of computation? 76 to 80	Technical solution	4.14.3.3	These lessons are given over to the project. This is marked out of 75 and worth 20% of the full A Level qualification. The technical solution section is worth 42 marks.				
81	SLR17 – Internal computer architecture (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR4 Year 17 Recap Lesson (student version)	 Interrupts	
82	SLR17 Internal computer architecture	4.7.3.6	<ul style="list-style-type: none"> Describe the role of interrupts and interrupt service routines (ISRs); their effect on the Fetch- 	What are interrupts and what role do they play? (SLR17 slide 11)	SLR17 Activities folder SLR17 Answers folder (Files starting 07)		

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			Execute cycle; and the need to save the volatile environment while the interrupt is being serviced.				
83	SLR18 – Input and output devices (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR4 Year 18 Recap Lesson (student version)		
84	SLR19– Moral, social, legal, cultural issues (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR4 Year 19 Recap Lesson (student version)		
85	SLR20 – Communication (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR4 Year 20 Recap Lesson (student version)		
86	SLR21 – Network and the Internet (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR4 Year 21 Recap Lesson (student version)	 Structure of the Internet  Packets and packet switching	
87	SLR21 Network and the internet	4.9.3.1	<ul style="list-style-type: none"> Understand the structure of the Internet. Understand the role of packet switching and routers. Know the main components of a packet. 	How does the internet work? (SLR21 slides 11)	SLR21 Activities folder SLR21 Answers folder (Files starting 00 & 05)		
88	SLR21 Network and the internet	4.9.3.1	<ul style="list-style-type: none"> Define: <ul style="list-style-type: none"> router gateway. Consider where and why they are used. Explain how routing is achieved across the Internet. 	How is routing achieved across the Internet? (SLR21 slides 9) What hardware is used to connect networks? (SLR21 slides 10)	SLR21 Activities folder SLR21 Answers folder (Files starting 00 & 05)	 The Internet and how it works	
89	SLR21 Network and the internet	4.9.3.1	<ul style="list-style-type: none"> Describe the term 'uniform resource locator' (URL) in the context of internetworking. Explain the terms 'fully qualified domain name' (FQDN), 'domain name' and 'IP address'. Describe how domain names are organised. Understand the purpose and function of the domain service and its reliance on the Domain Name Server (DNS) system. Explain the service provided by Internet registries and why they are needed. 	How does the internet work? (SLR21 slides 11)	SLR21 Activities folder SLR21 Answers folder (Files starting 00 & 06)	 How firewalls work	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

90	SLR21 Network and the internet	4.9.3.2	<ul style="list-style-type: none"> Understand how a firewall works (packet filtering, proxy server, stateful inspection). 	What are the threats to network security and how can they be mitigated? (SLR21 slides 12)	SLR21 Activities folder SLR21 Answers folder (Files starting 07)	 Symmetric and asymmetric encryption  Digital certificates and signatures	
91	SLR21 Network and the internet	4.9.3.2	<ul style="list-style-type: none"> Explain symmetric and asymmetric (private/public key) encryption and key exchange. Explain how digital certificates and digital signatures are obtained and used. 	How do digital certificates and digital signatures help to authenticate data transmission? (SLR21 slides 7) What is the difference between symmetric and asymmetric encryption? (SLR21 slides 8)	SLR21 Activities folder SLR21 Answers folder (Files starting 08)	 How to address worms, trojans and viruses  Network security threats	
92	SLR21 Network and the internet	4.9.3.2	<ul style="list-style-type: none"> Discuss worms, trojans and viruses, and the vulnerabilities that they exploit. Discuss how improved code quality, monitoring and protection can be used to address worms, trojans and viruses. 	What are the threats to network security and how can they be mitigated? (SLR21 slides 12)	SLR21 Activities folder SLR21 Answers folder (Files starting 09)		
93 to 100	Technical solution	4.14.3.3	These lessons are given over to the project. This is marked out of 75 and worth 20% of the full A Level qualification. <ul style="list-style-type: none"> The technical solution section is worth 42 marks. 				

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

YEAR 13 - TERM 4

	Topic Focus	Spec ref	Specification Learning Outcomes	Key question	Activities	HW for next lesson	Key Terms
101-105	This first week back has been set aside for you to carry out and mark and mock exam with your students.						
						The TCP IP stack and MAC addresses Well known ports	
106	SLR22 TCP IP and protocols	4.9.4.1	<ul style="list-style-type: none"> Describe the role of the four layers of the TCP/IP stack (application, transport, network, link). Describe the role of sockets in the TCP/IP stack. Be familiar with the role of MAC (Media Access Control) addresses. Explain what the well-known ports and client ports are used for and the differences between them. 	What are the features of a protocol? (SLR22 slides 3) How does the TCP/IP protocol work? (SLR22 slides 4)	SLR22 Activities folder SLR22 Answers folder (Files starting 01 & 02)	Introduction to protocols FTP	
107	SLR22 TCP IP and protocols	4.9.4.1 & 2	<ul style="list-style-type: none"> Be familiar with the following protocols: <ul style="list-style-type: none"> FTP (File Transfer Protocol) HTTP (Hypertext Transfer Protocol) HTTPS (Hypertext Transfer Protocol Secure) POP3 (Post Office Protocol (v3)) SMTP (Simple Mail Transfer Protocol) SSH (Secure Shell). Be familiar with FTP client software and an FTP server, regarding transferring files using anonymous and non-anonymous access. 	How do the following protocols work: FTP, HTTP(S), POP3, SMTP, SSH? (SLR22 slides 5)	SLR22 Activities folder SLR22 Answers folder (Files starting 03 & 04)	SSH	
108	SLR22 TCP IP and protocols	4.9.4.2	<ul style="list-style-type: none"> Be familiar with how SSH is used for remote management. Know how an SSH client is used to make a TCP connection to a remote port and send commands to this port using application-level protocols such as GET for HTTP, SMTP commands for sending email and POP3 for retrieving email. Be familiar with using SSH to log in securely to a remote computer and execute commands. 	How do the following protocols work: FTP, HTTP(S), POP3, SMTP, SSH? (SLR22 slides 5)	SLR22 Activities folder SLR22 Answers folder (Files starting 05)	Email servers	
109	SLR22 TCP IP and protocols	4.9.4.2	<ul style="list-style-type: none"> Explain the role of an email server in retrieving and sending email. 	How do email and web servers work? (SLR22 slides 6)	SLR22 Activities folder SLR22 Answers folder	Web servers and web browsers	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

					(Files starting 06)	 The structure of IP addresses	
110	SLR22 TCP IP and protocols	4.9.4.2 & 3	<ul style="list-style-type: none"> Explain the role of a web server in serving up web pages in text form. web pages and web page resources and rendering these accordingly. Know that an IP address is split into a network identifier part and a host identifier part. 	How do email and webservers work? (SLR22 slides 6)	SLR22 Activities folder SLR22 Answers folder (Files starting 06 & 07)	 IPv4 and IPv6  Routable and non-routable IP addresses	
111	SLR22 TCP IP and protocols	4.9.4.4 & 5	<ul style="list-style-type: none"> Know that networks can be divided into subnets and know how a subnet mask is used to identify the network identifier part of the IP address. Know that there are currently two standards of IP address, v4 and v6. Know why v6 was introduced. 	What is IPv4 and why is there a need for IPv6? (SLR22 slides 7)	SLR22 Activities folder SLR22 Answers folder (Files starting 07 & 08)	 DHCP  NAT and port forwarding	
112	SLR22 TCP IP and protocols	4.9.4.6, 7 & 8	<ul style="list-style-type: none"> Distinguish between routable and non-routable IP addresses. Understand the purpose and function of the DHCP system. Explain the basic concept of NAT and why it is used. 	How do DHCP and NAT work and why are they needed? (SLR22 slides 8)	SLR22 Activities folder SLR22 Answers folder (Files starting 00 & 07)	 The client-server model	
113	SLR22 TCP IP and protocols	4.9.4.9 & 10	<ul style="list-style-type: none"> Explain the basic concept of port forwarding and why it is used. Be familiar with the client-server model. 	What is port forwarding and how does it work? (SLR22 slides 9) What is the client-server model (SLR22 slides 10)	SLR22 Activities folder SLR22 Answers folder (Files starting 07 & 09)	 The WebSocket protocol  Web CRUD and applications at REST  JSON and XML	
114	SLR22 TCP IP and protocols	4.9.4.10	<ul style="list-style-type: none"> Be familiar with the WebSocket protocol and know why it is used and where it is used. Be familiar with the principles of Web CRUD Applications and REST: <ul style="list-style-type: none"> CRUD is an acronym for: <ul style="list-style-type: none"> C – Create R – Retrieve • U – Update D – Delete. REST enables CRUD to be mapped to database functions (SQL) as follows: <ul style="list-style-type: none"> GET → SELECT POST → INSERT 	What are the principles of Web CRUD Applications and how is this associated with “REST”? (SLR22 slides 12) What are the advantages of JSON over XML? (SLR22 slides 13)	SLR22 Activities folder SLR22 Answers folder (Files starting 10,11 & 12)	 Thin client and thick client computing	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			<ul style="list-style-type: none"> DELETE → DELETE PUT → UPDATE. Compare JSON (Java script object notation) with XML. 				
115	SLR22 TCP IP and protocols	4.9.4.11	<ul style="list-style-type: none"> Compare and contrast thin-client computing with thick-client computing. 	What are the advantages and disadvantages of thin vs thick-client computing? (SLR22 slides 11)	SLR22 Activities folder SLR22 Answers folder (Files starting 13)		
116	SLR22 – End-of-topic test	End-of-topic test Students to self-assess and mark each other's questions to become familiar with examining mark schemes.			SLR22 Examination Questions (slides 14-15)		
117 to 122	Technical solution Evaluation	4.14.3.3 & 4.14.3.6	These lessons are given over to the project. This is marked out of 75 and worth 20% of the full A Level qualification. The technical solution section is worth 42 marks. The evaluation section is worth 4 marks.				
						 Databases	
123	SLR23 Databases	4.10.1.1	<ul style="list-style-type: none"> Produce a data model from given data requirements for a simple scenario involving multiple entities. Produce entity-relationship diagrams representing a data model and entity descriptions in the form: Entity1 (Attribute1, Attribute2,). 	What are the key terms associated with databases? (SLR23 slides 2)	SLR23 Activities folder SLR23 Answers folder (Files starting 00 & 01)		
124	SLR23 Databases	4.10.2.2	<ul style="list-style-type: none"> Explain the concept of a relational database. Be able to define the terms: <ul style="list-style-type: none"> attribute primary key composite primary key foreign key. 	What are the key terms associated with databases? (SLR23 slides 2) Can you explain the concepts of a relational database? (SLR23 slides 3)	SLR23 Activities folder SLR23 Answers folder (Files starting 00 & 01)		
125	SLR23 Databases	4.10.2.2	<ul style="list-style-type: none"> Explain the concept of a relational database. Be able to define the terms: <ul style="list-style-type: none"> attribute primary key composite primary key foreign key. 	What are the key terms associated with databases? (SLR23 slides 2) Can you explain the concepts of a relational database? (SLR23 slides 3)	SLR23 Activities folder SLR23 Answers folder (Files starting 00 & 01)	 Normalisation to 3NF	
126	SLR23 Databases	4.10.3.3	<ul style="list-style-type: none"> Normalise relations to third normal form. Understand why databases are normalised. 	What is the purpose of normalisation? (SLR23 slides 4)	SLR23 Activities folder SLR23 Answers folder		

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

					(Files starting 02)		
127	SLR23 Databases	4.10.3.3	<ul style="list-style-type: none"> Normalise relations to third normal form. Understand why databases are normalised. 	What is the purpose of normalisation? (SLR23 slides 4)	SLR23 Activities folder SLR23 Answers folder (Files starting 02)	 SQL	
128	SLR23 Databases	4.10.4.1	<ul style="list-style-type: none"> Be able to use SQL to retrieve, update, insert and delete data from multiple tables of a relational database. Be able to use SQL to define a database table. 	How do you use the main keywords in SQL to create, return and delete data in a database? (SLR23 slides 5)	SLR23 Activities folder SLR23 Answers folder (Files starting 03)	 Transaction processing	
129	SLR23 Databases	4.10.5.1	<ul style="list-style-type: none"> Know that a client-server database system provides simultaneous access to the database for multiple clients. Know how concurrent access can be controlled to preserve the integrity of the database. 	How do databases deal with concurrent access and make sure that it preserves data integrity? (SLR23 slides 6)	SLR23 Activities folder SLR23 Answers folder (Files starting 04)		
130	SLR23 – End-of-topic test	End-of-topic test Students to self-assess and mark each other's questions to become familiar with examining mark schemes.			SLR23 Examination Questions (slides 7-9)

YEAR 13 - TERM 5							
Topic Focus		Spec ref	Specification Learning Outcomes	Key question	Activities	HW for next lesson	Key Terms
						 What is Big Data  Big Data and functional programming  Representing Big Data	
131	SLR24 Big Data	4.11.1.1	<ul style="list-style-type: none">Know that 'Big Data' is a catch-all term for data that won't fit the usual containers. Big Data can be described in terms of:<ul style="list-style-type: none">volume – too big to fit into a single servervelocity – streaming data, milliseconds to seconds to respondvariety – data in many forms such as structured, unstructured, text, multimedia.Know that when data sizes are so big as not to fit on to a single server:<ul style="list-style-type: none">the processing must be distributed across more than one machinefunctional programming is a solution because it makes it easier to write correct and efficient distributed code.Know what features of functional programming make it easier to write:<ul style="list-style-type: none">correct codecode that can be distributed to run across more than one server.	What is Big Data? (SLR24 slides 2) How do we handle Big Data given that it can't fit onto a single server? (SLR24 slides 3)	SLR24 Activities folder SLR24 Answers folder (Files starting 01 & 02)		
132	SLR24 Big Data	4.11.1.1	<ul style="list-style-type: none">Be familiar with the:<ul style="list-style-type: none">fact-based model for representing datagraph schema for capturing the structure of the datasetnodes, edges and properties in graph schema.	How does the fact-based model allow us to represent Big Data? (SLR24 slides 4) How does a graph scheme allow us to represent Big Data? (SLR24 slides 5)	SLR24 Activities folder SLR24 Answers folder (Files starting 03)		

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

133 & 134	Evaluation and project hand in	4.14.3.6	These lessons are given over to the project. This is marked out of 75 and worth 20% of the full A Level qualification. The evaluation section is worth 4 marks.				
						 Basics of functional programming	
135	SLR25 Functional programming paradigms	4.12.1.1 & 2	<ul style="list-style-type: none">Know that a function, f, has a function type $f: A \rightarrow B$ (where the type is $A \rightarrow B$, A is the argument type, and B is the result type). Know that A is called the domain and B is called the co-domain. Know that the domain and co-domain are always subsets of objects in some data type.Know that a function is a first-class object in functional programming languages and in imperative programming languages that support such objects. This means that it can be an argument to another function as well as the result of a function call.	What is functional programming, and how is it different from other programming paradigms? (SLR25 slides 2)	SLR25 Activities folder SLR25 Answers folder (Files starting 00, 01 & 02)	 Function and partial function application	
136	SLR25 Functional programming paradigms	4.12.1.3	<ul style="list-style-type: none">Know that function application means a function applied to its arguments.	What are the key terms associated with functional programming? (SLR25 slides 3)	SLR25 Activities folder SLR25 Answers folder (Files starting 00, 01 & 02)		
137	SLR25 Functional programming paradigms	4.12.1.4	<ul style="list-style-type: none">Know what is meant by partial function application for one, two and three-argument functions and be able to use the notations shown opposite.	What is partial function application and how does it work? (SLR25 slides 4)	SLR25 Activities folder SLR25 Answers folder (Files starting 00, 01 & 02, 03)	 Composition of functions	
138	SLR25 Functional programming paradigms	4.12.1.5	<ul style="list-style-type: none">Know what is meant by composition of functions.	What is meant by the composition of functions? (SLR25 slides 5)	SLR25 Activities folder SLR25 Answers folder (Files starting 00, 01 & 02, 04)		
139	SLR25 – End-of-topic test	End-of-topic test Students to self-assess and mark each other's questions to become familiar with examining mark schemes.			SLR25 Examination Questions (slide 6)	 Higher-order functions	

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

140	SLR26 Writing functional programs	4.12.2.1	<ul style="list-style-type: none"> Show experience of constructing simple programs in a functional programming language. Higher-order functions. Have experience of using the following in a functional programming language: <ul style="list-style-type: none"> map filter reduce or fold. 	<p>What is a higher-order function? (SLR26 slides 2)</p> <p>How do map, filter and reduce or fold work? Provide examples. (SLR26 slides 3)</p>	SLR26 Activities folder SLR26 Answers folder (Files starting 00, 01 & 02)	 List operations in functional programming  Introduction to Haskell	
141	SLR26 Writing functional programs	4.12.3.1	<ul style="list-style-type: none"> Be familiar with representing a list as a concatenation of a head and a tail. Know that the head is an element of a list and the tail is a list. Know that a list can be empty. Describe and apply the following operations: <ul style="list-style-type: none"> return head of list return tail of list test for an empty list return length of list construct an empty list prepend an item to a list append an item to a list. Have experience writing programs for the list operations mentioned above in a functional programming language or a language with support for the functional paradigm. 	<p>How does a list work in functional programming? Provide examples. (SLR26 slides 4)</p>	SLR26 Activities folder SLR26 Answers folder (Files starting 00, 01 & 03)		
142	SLR26 – End-of-topic test	End-of-topic test Students to self-assess and mark each other's questions to become familiar with examining mark schemes.			SLR26 Examination Questions (slide 5)		
143	SLR27 – Aspects of software development (AS RECAP LESSON)	AS recap	Recap last year's AS knowledge of this topic as it will all be reassessed at the end of the year as part of the full A Level exam.	What can you remember from the Year 12 AS course without additional aid?	SLR4 Year 27 Recap Lesson (student version)	 Iterative design and development	
145	SLR27 Aspects of software development	4.13.1.2 & 3	<ul style="list-style-type: none"> Be aware that design can be an iterative process involving a prototyping/agile approach. Be aware that the final solution may be arrived at using an iterative process employing prototyping/ an agile approach with a focus on solving the critical path first. 	<p>What is the agile approach to software development? (SLR27 slides 3)</p> <p>What is prototyping and why is it an important part of software development?</p>	SLR27 Activities folder SLR27 Answers folder (Files starting 04)		

AS and A Level AQA Computer Science – Scheme of Learning (AS in Y12 and additional content for the full A Level in Y13)

			(SLR27 slides 4)			
146	SLR27 Aspects of software development	4.13.1.4	<ul style="list-style-type: none"> Be aware a system should also undergo acceptance testing with the intended user(s) of the system to ensure that the intended solution meets its specification. 	What is acceptance testing? (SLR27 slides 6)	SLR27 Activities folder SLR27 Answers folder (Files starting 05)	
147	SLR27 – End-of-topic test	End-of-topic test Students to self-assess and mark each other's questions to become familiar with examining mark schemes.			SLR27 Examination Questions (slide 8-9)	
148	Revision	This period is given over to revision. We have many resources to help with revision. We have a dedicated FREE site for students with all our videos and downloadable cheat sheets: student.craigndave.org We have a series of videos on exam technique, including how to understand command words and answer extended questions: student.craigndave.org/videos/exam-technique  We also have a dedicated revision app called Smart Revise which has a full coverage of the AQA AS/A Level course. It will have a pin-sharp focus on the specification and every single bullet point covered. <ul style="list-style-type: none"> For a summary and to share with your colleagues visit smartrevise.craigndave.org. To get started with a free trial visit www.smartrevise.online. To check out our overview videos visit our YouTube channel: www.youtube.com/watch?v=XqJZNTZNa9M&list=PLCiOXwirraUBSzkbl4TaGvXkhP6NkzVgi
